In re Application of

Shinpei OKAJIMA

Serial No.:

10/765,997

Filed: January 29, 2004

For: BICYCLE RIM

## INFORMATION DISCLOSURE STATEMENT

Assistant Commissioner of Patents Washington, DC 20231

Sir:

In accordance with MPEP 609 and 37 C.F.R. §§ 1.56, 1.97 and 1.98, Applicant(s) bring the references listed on the attached PTO-1449-Form to the Examiner's attention and request that they be considered and made of record in this application. A copy of the non-U.S. patent is attached. This Information Disclosure Statement is being filed within three (3) months of the filing date of this application. Thus, no fee is believed to be due for this Information Disclosure Statement. However, the Commissioner is authorized to charge any fees associated with this communication or credit any overpayment to Deposit Account No. 50-1836. A duplicate copy of this Statement is enclosed for that purpose.

Since this application was filed after June 30, 2003, the U.S. Patent and Trademark Office waives the requirement under 37 C.F.R. 1.98 (a) (2) (i) for submitting a copy of each cited U.S. Patent and each U.S. patent application publication.

European Patent Publication No. EP 0 714 791 discloses a rim body (2) with several spaced coaxial holes (210) for the passage of spokes (82). The rim has guides (9) housed inside the casing that are held axially before mounting the spokes by lugs (93). An English abstract is attached for the Examiner's convenience.

European Patent Publication No. EP 0 715 001 discloses a process comprising bending an aluminum alloy profile produced by drawing or extrusion, followed by a chemical treatment stage which includes removing metal from the rim (2) by immersing it in a bath (52) of an aggressive chemical liquid (51). This is followed by rinsing in a second bath (54) containing a rinsing liquid (53) then neutralizing in a third bath (56) followed by a second

rinsing stage in another rinsing bath (58). An English abstract is attached for the Examiner's convenience.

European Patent Publication No. EP 1 167 078 discloses a spoke anchorage device consisting of a ferrule (12), with the outer wall screwed into a threaded location (7) in the rim (1) of the wheel. A nut (14) is screwed onto the threaded end (11) of the spoke (10). An English abstract is attached for the Examiner's convenience.

Japanese Patent Publication No. 6-39502 appears to disclose a portion of an annular rim (10) having a plurality of transverse spoke attachment openings (17/18) formed in the radially inner part thereof with bent ends of spokes (20) mounted therein. The radially inner part of the rim (10) appears to have cutouts as seen in Figure 3.

Japanese Patent Publication No.7-501022 discloses a rim (1) with a plurality of nipple holes (2), each nipple hole (2) engaged by a nipple (3). The nipples (3) have an inner thread (4) and a spot for applying a torque that allows the nipple to be turned in order to adjust the individual prestress of each spoke (6). In order to allow the spokes (6) to be exchanged without dismounting the tire, the nipple (3) is supported on the rim (1) by a further thread coupling (8/9). An English abstract of International Patent No. WO 93/09963, which is an equivalent of this Japanese patent publication, is attached for the Examiner's convenience.

Taiwanese Patent Publication No. 313981 appears to disclose part of an annular rim (1) with spokes (3) coupled to members (4). An additional member (2) appears to be mounted in a trough of the rim (1) between the heads of the members (4) and the rim (1).

Prompt examination on the merits is respectfully requested.

Respectfully submitted,

Patrick A. Hilsmier Reg. No. 46,034

SHINJYU GLOBAL IP COUNSELORS, LLP 1233 Twentieth Street, NW, Suite 700 Washington, DC 20036
